100% Python standard library

Chat across your Wi-Fi. No servers.

PyMessenger finds every device running it on the same Wi-Fi and lets you chat 1-on-1, straight from the terminal.

Get the code

Run it

pymessenger — zsh

```
$ python3 pymessenger.py
[*] PyMessenger online as DESKTOP-A1 @ 192.168.1.24
[+] Discovered: laptop-maya (192.168.1.31)
[+] Discovered: raspberrypi (192.168.1.40)
> /select 1
[chat] → laptop-maya
you: lunch in 10?
laptop-maya: on my way 🍕
```

Auto discovery

Devices announce themselves over UDP broadcast — everyone nearby appears instantly.

Private 1-on-1 chat

Messages go direct over TCP, device to device. Nothing ever touches the internet.

Edit with Lovable
